

**FOR IMMEDIATE RELEASE**

## **Egnyte Everywhere Offers Mobile File Access, File Sharing and Backup**

*National Survey Illustrates the Need for Data Without Boundaries-- When Nature Calls 53% Find It in the Bathroom*

**Mountain View, CA, July 20, 2010** – Egnyte, a leading provider of [cloud file server](#) solutions, today announced Egnyte Everywhere, a new mobile suite that allows business users to securely [access and share](#) their business files from leading smartphones, including iPhone, Android and Blackberry, as well as the new iPad. The iPhone app leverages iOS 4 in providing off-line access to files including support for iTunes [file sharing](#). The announcement coincides with the release of a new national study on mobility and data access while on the road. The study revealed that when nature calls, the hard working keep working with 53 percent of mobile professionals admitting to accessing data from their smartphone while in the bathroom. In addition, document apps appear to be a big hit with mobile business professionals; 36 percent stated that among all top apps, document apps keep them most productive while on the road.

The mobile survey, which was commissioned by Egnyte, revealed that the number one thing mobile professionals miss most about not working in the office is easily accessing files from a file server. Egnyte Everywhere provides anytime access and easy file sharing capabilities from leading smartphones. The product offers new native applications for the iPhone and iPad, along with web based access to files for Blackberry and Android users via the Egnyte mobile drive – “m” drive - that enables mobile secure access to their Egnyte file server without any additional software installation on the device.

Key features of Egnyte Everywhere include:

- Administration on the go, allowing account administrators to [manage users](#) and folder permissions
- Ability to access shared and private folders
- Enable users to review current and older file versions
- Easy folder navigation and quick keyword searches to find files
- Ability to share files via [secure links](#)

The native applications for iPhone and iPad users and web based access for other smartphones provide centralized file server administration to mobile users. Mobile users can easily access and share files, navigate folder hierarchies and upload files from their smartphones.

Other key findings from the survey included:

- Nearly half (41%) of respondents reported that printing is the most frustrating thing about working outside of the office while 36% were most frustrated by the inability to find a fast and reliable WiFi connection.
- The iPad may be popular but 63% of professionals stated that it would not replace the PC.

- Worthy of a Dr. Drew intervention, 41% of mobile professionals confess they are most addicted to the Facebook app.
- In the battle of the smartphone titans—Apple versus Google, almost 60% of mobile professionals favor the iPhone as America's biggest winner edging out Android who had 29%.

“With smartphones and now the iPad becoming primary communications tools for business users, it is critical that files not only be easily accessed from a desktop or a laptop, but also from these increasingly popular mobile devices,” said Vineet Jain, CEO of Egnyte. “Egnyte Everywhere offers that functionality so that on the road or in an office, users have secure and immediate access to their files.”

### **About the Study**

Egnyte conducted this study from June 8, 2010 to June 15, 2010. Over 600 mobile business professionals answered an online survey by Zoomerang.
