

# EGNYTE STORAGE CONNECT

## Simple, Secure Access to Data Behind the Firewall

Being able to access the information you need, when you need it is a lot easier said than done, particularly when that information is highly sensitive or governed by regulatory requirements that dictate it has to be stored on-premises. Egnyte Storage Connect provides an elegant solution, enabling users on the go to access and edit files stored behind the firewall, without that content ever leaving your data center. The mobile, VPN-less solution is so simple to work with that users will no longer resort to emailing files back and forth or using consumer cloud file sharing solutions (Shadow IT), which introduce risks to the privacy and security of your data and versioning issues. With Egnyte Storage Connect, you have the control and agility your business needs and the convenience your users demand, while strengthening your security and compliance.

## Enterprise Security

Storage Connect provides mobile, VPN-less access to files stored on any local storage, without the files, or even the file's metadata ever passing through the cloud. Files can be locked, which means they can be previewed, downloaded and copied, but not moved, renamed, deleted, or updated, which maintains the integrity of your content. Link security options let you to prohibit public link sharing from specific file stores to ensure your most sensitive data remains private. For added security, the solution encrypts all traffic via SSL/TLS and can be deployed in a DMZ in the corporate network, rather than within the network itself.

### HIGHLIGHTED FEATURES

- Unified file locking between local and remote users
- No data or metadata ever transits Egnyte cloud
- Encrypted in transit via SSL/TLS
- File access and login auditing
- Supports deployment within DMZ

## Seamless User Experience

Users can use a standard browser or any mobile device to access the files they need, regardless of where they are stored. Through the Storage Connect secure mobile app or Web UI, users can take advantage of cloud collaboration features, such as link sharing and shared folders. They can also remain confident they always have on-demand access to their latest documents, as Storage Connect automatically opens and saves changes to files in its native application to eliminate any versioning issues.

- Access via iOS and Android apps
- Access via web browser
- Common cloud and on-prem UI
- Switch between cloud and on-premises file stores

## Leverages Existing Storage

Storage Connect works with any of your existing data stores, which can reside on any kind of storage (direct attached, SAN, or NAS). You don't have to move any of your data; Storage Connect is designed to give your users the ability to access and share data from their current location, without the need of a VPN. Most importantly, existing file sharing permissions (ACL's) are respected and no proprietary file access protocols are required.

- Can access any CIFS storage
- Attached, NAS or SAN devices
- Use existing file permissions
- Control read and write access

## Easy Implementation

Storage Connect is a virtual appliance that can be deployed behind your firewall and up and running in minutes. It connects to existing storage, via CIFS or NFS, and enables remote access to file stores, without that data ever leaving the internal network. Storage Connect separates the control plane from the data plane, so IT can deploy multiple virtual appliances to create a unified namespace that connects multiple file shares in various geographies to give users a logical single pane of glass for all files, which could be located anywhere in the world. Through an easy-to use Web UI, you can quickly set controls over where files are stored, who can access them and how they can be shared.

## Designed for the Enterprise

Cluster deployments of Storage Connect enable you to deliver high availability and horizontal scalability that meets your privacy and security requirements, even as your business grows and the complexity of your environment increases. Storage Connect's ability to integrate with your existing infrastructure and support zero-downtime upgrades enables you to maximize the investments you have made, while improving user collaboration and productivity and strengthening your overall security.

## Summary

Your data is your business. It needs to be both secure and accessible. With Storage Connect, those requirements are not incompatible; in fact, the mobile, VPN-less solution optimizes both, making it easier and more secure for users to access the files they need, when they need them, from wherever they are located. For data that needs to stay on-premises, Storage Connect allows users to access the files, via their mobile device or a web browser, without the data ever leaving your data center. Secure Connect enables you to support collaboration, as well as the privacy, security and compliance requirements of your business.

### HIGHLIGHTED FEATURES

- Can be deployed in < 20 min
- Supports VMware and Hyper-V
- Automatic node discovery
- Single unified user interface

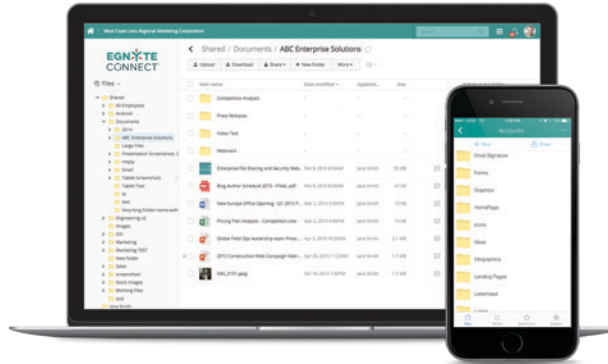

- Automatic node failover
- Built-in load balancer
- Add extra nodes to cluster simply by provisioning new VMs
- Can support zero-downtime upgrade
