## Customer Challenges

Enabling the flow of information both inside and outside of your organization is vital to driving your business forward. It needs to be easy for you and your employees, contractors, vendors, and even customers to quickly and securely share files to enable collaboration, innovation and productivity.

- Usability vs Security: IT organizations need to maintain complete control over where data resides and how it's shared, without hindering user productivity and growth
- Apps as Data Silos: The growth of digital apps across devices siloes where documents are stored and how they're shared, making it hard for users to access the right content at the right time
- Content Flexibility: Businesses with complex data requirements need a system that allows cloud, on-prem, or hybrid deployments while maintaining complete content governance
