

ENTERPRISE FILE SERVICES

Overview

Egnyte delivers **Enterprise File Services** that uniquely anticipate the needs of users and IT departments, so they can easily, securely and intelligently access and share files, **on premises and in the cloud**. Egnyte provides unparalleled flexibility, unified visibility and centralized control over file services to optimize collaboration with people both inside and outside the organization.

Unlike other Enterprise File Sync and Share (EFSS) service providers that lock customers into using only their applications, storage, cloud and other proprietary components, Egnyte delivers an **open platform** that preserves a customer's ability to choose what works best for their business. With Egnyte, organizations can maximize and future-proof their investments with file services that integrate with many user devices, business apps, on-premises storage, and cloud solutions.

Addressing Shadow IT

According to a recent survey, **IT departments underestimate the number of non-sanctioned cloud applications in their environment by a factor of 10.**

Egnyte can help stem the tide of Shadow IT apps by providing users with easy access to all of the files they need, while delivering the visibility and control IT requires to support security and compliance objectives. With Egnyte, organizations can have it all – users can leverage the productivity tools and devices they prefer to get work done, while IT can maximize and future-proof their investments in applications, as well as on-premises and cloud storage.

The Benefits of Egnyte

Enterprise File Services uniquely anticipate the needs of users and IT to optimize collaboration.

INCREASES PRODUCTIVITY

Integrates with existing workflows and infrastructure to enable users to leverage whatever devices and **apps** they choose to get their work done, while freeing IT to focus on improving the overall performance and efficiency of their apps, on premises and in the cloud.

STRENGTHENS SECURITY

Provides end-to-end **file monitoring**, management, and protection so organizations can ensure the integrity and privacy of their information, regardless of where files are stored or who needs to access them (both internally and externally), to reduce data-leakage risks and support compliance initiatives.

OPTIMIZES WORKFLOW

Gives both IT and users insights, **unified visibility** and centralized control over how information is accessed and shared. They can refine content strategies and streamline activities to improve the flow of information, maximize the utilization of their resources, and optimize the overall experience.

REDUCES COSTS

Eliminates the need for organizations to independently manage multiple information systems, and enables them to choose the best devices, apps, on-premises storage, and cloud solutions. It can easily move files between cloud and on-premises resources for maximizing infrastructure investments and adapt to changing needs.
